Re: K000343
Trade Name: NAC Y-ADP
Regulatory Class: II
Product Code: FPA
Dated: January 31, 2000
Received: February 3, 2000

Dear Mr. Werschmidt:

We have reviewed your Section 510(k) notification of intent to market the device referenced above and we have determined the device is substantially equivalent (for the indications for use stated in the enclosure) to devices marketed in interstate commerce prior to May 28, 1976, the enactment date of the Medical Device Amendments, or to devices that have been reclassified in accordance with the provisions of the Federal Food, Drug, and Cosmetic Act (Act). You may, therefore, market the device, subject to the general controls provisions of the Act. The general controls provisions of the Act include requirements for annual registration, listing of devices, good manufacturing practice, labeling, and prohibitions against misbranding and adulteration.

If your device is classified (see above) into either class II (Special Controls) or class III (Premarket Approval), it may be subject to such additional controls. Existing major regulations affecting your device can be found in the Code of Federal Regulations, Title 21, Parts 800 to 895. A substantially equivalent determination assumes compliance with the Good Manufacturing Practice for Medical Devices: General (GMP) regulation (21 CFR Part 820) and that, through periodic GMP inspections, the Food and Drug Administration (FDA) will verify such assumptions. Failure to comply with the GMP regulation may result in regulatory action. In addition, FDA may publish further announcements concerning your device in the Federal Register. Please note: this response to your premarket notification submission does not affect any obligation you might have under sections 531 through 542 of

Page 2 -Mr. Werschmidt

the Act for devices under the Electronic Product Radiation Control provisions, or other Federal laws or regulations.

This letter will allow you to begin marketing your device as described in your 510(k) premarket notification. The FDA finding of substantial equivalence of your device to a legally marketed predicate device results in a classification for your device and thus, permits your device to proceed to the market.

If you desire specific advice for your device on our labeling regulation (21 CFR Part 801 and additionally 809.10 for in vitro diagnostic devices), please contact the Office of Compliance at (301) 594-4690. Additionally, for questions on the promotion and advertising of your device, please contact the Office of Compliance at (301) 594-4639. Also, please note the regulation entitled, "Misbranding by reference to premarket notification" (21 CFR 807.97). Other general information on your responsibilities under the Act may be obtained from the Division of Small Manufacturers Assistance at its toll-free number (800) 638-2041 or (301) 443-6597 or at its internet address "<http://www.fda.gov/cdrh/dsmamain.html>".

Sincerely yours,

E, Timothy A. Ulatowski
Director

Division of Dental, Infection Control,
and General Hospital Devices

Center for Devices and
Radiological Health

Enclosure

510(k) Number (if known): K000343

Device Name: NAC Y-ADP

Indications for Use:

The NAC Y-ADP is a single use, sterile, non-pyrogenic device intended for use as an accessory to an Intravascular Administration Set for the administration of fluids to a patient through a cannula placed in the vein or artery.

The increased awareness of accidental needlesticks occurring during IV access, and therefore, The potential of transmitting infectious diseases such as Hepatitis B and HIV to healthcare Workers, has led to the development of several protective medical devices.

One growing area of product development is in the Needleless Access Connector (NAC) market which precludes accidental needlesticks by eliminating the conventional method of using sharp metal needles for accessing IV lines. These new devices are Luer Activated Valves (LAVs) which simply require a standard male luer to access these connectors, no sharp metal needles are required. The latest generation also eliminates the need for protective caps by providing a top surface which is swabbed before use, typically with an alcohol prep pad.
